PV101 Day 8 Daily Run Sheet

Instructor-facing plan for Rich or a substitute | Thursday, July 16, 2026

Day_08_PV101_Final_Review_and_Assessment_2026-07-16

Topic: Final Review and Assessment

Class setup: 6 students | 10:00 AM-3:00 PM | Calm, practical, evidence-first instruction

Teaching frame

- Main message: the final checks whether students can apply PV101 fundamentals safely and clearly.
- The final is a traditional graded assessment: 25 questions, one point each.
- Do not coach answers during the final. Clarify directions or unreadable wording only.
- PV101 ends today with reflection, evidence collection, and a clean instructional closeout—no capstone or certification exercise.

Substitute quick start

- [ ] Read the full schedule before students arrive.
- [ ] Locate emergency disconnects, first-aid supplies, calculator policy, and secure test storage.
- [ ] Print student materials and keep answer keys/instructor notes separate.
- [ ] Write the day goal, schedule, and stop-work rule on the board.
- [ ] If uncertain about equipment or assessment handling, use the reduced-scope path and contact program leadership.

Learning targets

- Recall and apply core ideas from all 12 assigned chapters.
- Use formulas, diagrams, sequencing, and written reasoning accurately.
- Choose safe verification and troubleshooting steps instead of guessing.
- Complete a traditional graded 25-question assessment independently.
- Reflect on PV101 growth and leave materials organized and secure.

Materials

- Readiness quiz and key
- Day 8 slide deck and whiteboard outline
- 25-question final tests and secured answer key
- Calculators and scratch paper as allowed
- Reflection sheet and evidence checklist
- Folders/envelopes for completed graded work

Daily schedule

Time	Block	Instructor notes
10:00-10:10	Arrival, attendance, check-in	Students receive readiness quiz only. Final tests remain secured.
10:10-10:20	Day goal + test expectations	Explain the day: review, demonstrate individual understanding, reflect, and close PV101.
10:20-10:35	Morning readiness quiz	Short five-question check distinct from the graded final.
10:35-10:55	Readiness review	Correct together. Use results to choose which misconceptions need the most review.
10:55-11:20	Whiteboard review	Sort concepts into energy path, measurement, workmanship, protection, troubleshooting, and sizing.
11:20-11:30	Break	Students reset. Instructor keeps final tests and answer key controlled.
11:30-12:00	Slides: cumulative review	Review formulas, meter discipline, protection, series/parallel, troubleshooting evidence, and sizing steps.
12:00-12:20	Practice questions	Work examples that are similar in skill but not identical to final-test questions.
12:20-12:30	Final instructions	Explain 25 questions, one point each, calculator policy, quiet conditions, and how to request clarification.
12:30-1:00	Lunch	Final tests remain secured. No discussion of test content.
1:00-2:10	PV101 final assessment	Traditional graded 25-question cumulative test. Instructor monitors without coaching answers.

2:10-2:20	Collect + verify materials	Count every test and scratch page. Store answer key separately.
2:20-2:35	Course reflection	Students reflect on verification, growth, remaining practice needs, and safe-work habits.
2:35-2:45	PV101 closeout discussion	Name the skills completed and state simply that PV101 is complete. No capstone or project presentation.
2:45-2:55	Evidence + Classroom upload	Submit reflection and any required learning evidence; instructor completes evidence checklist.
2:55-3:00	Cleanup + dismissal	Room reset, materials counted, student papers secured, PV101 formally closed.

Safety and instructional stop conditions

- Final tests or answer keys are unaccounted for.
- Students discuss answers during the individual test.
- A question appears to require content not taught; note it for review without coaching an answer.
- A student becomes overwhelmed; provide a quiet reset while preserving test integrity.
- Assessment materials are photographed or uploaded without authorization.

Reduced-scope backup

Day 7: if calculators or printing fail, complete one class example on the whiteboard and have students show units and reasonableness on notebook paper. Day 8: if final-test printing fails, run structured review and reflection; do not improvise a different final from memory. Reschedule the secured assessment.

Early finishers

Day 7: check every unit, redo one calculation independently, and write one sentence explaining each sizing result. Day 8: quietly review answers, then begin the reflection only after turning in the final.
