EDM101 Day 1 Morning Quiz

20 questions | 20 minutes | Independent work

EDM101 | CTS Day 25 | Morning Quiz - Student

Professional show technology is fun only when the energy is controlled. | *Monday, August 17, 2026*

Name: _____ Date: _____

Directions: Choose the best answer. Work independently. If unsure, pick the safest professional action rather than guessing from habit.

1. EDM101 Day 1 frames the course primarily as:

A. A production-systems class where electricity becomes sound, light, motion, and human experience through signal, power, and safety boundaries
B. A music-only class focused on playlists and artist history
C. A carpentry-only class where electronics are avoided
D. A free-demo day where gear is energized before planning

2. The core rule for EDM101 Day 1 is:

A. Professional show technology is safe because it is fun
B. Professional show technology is fun only when the energy is controlled
C. Professional show technology should always be operated at full power
D. Professional show technology does not require boundaries when the class is small

3. Why does Day 1 begin with laser safety instead of treating lasers as a casual demo?

A. Because laser safety is only paperwork and does not affect the lab
B. Because the class is avoiding all hands-on work
C. Because the course starts with real professional responsibility before energizing show equipment
D. Because students are expected to operate the laser without review

4. The laser should not be energized unless which set of conditions is clean?

A. Beam path, termination, restricted area, and operator control
B. Music volume, playlist order, fog density, and stage color
C. Cabinet paint, driver label, tool cart, and lunch plan
D. Only the projector angle and classroom lighting

5. For the Day 1 laser lab, audience scanning should be treated as:

A. Acceptable if students ask for it
B. Allowed during the first five minutes only
C. Not allowed
D. Required for a complete demonstration

6. If a safe laser setup is not available, the Day 1 lab should become:

A. A full-power demonstration with students farther away
B. A dry setup and safety-planning exercise
C. A cabinet-cutting exercise using unofficial plans
D. An unsupervised exploration period

7. In the Day 1 laser setup, a restricted area is mainly used to:

A. Make the room look more professional without changing safety
B. Keep people out of the controlled laser boundary
C. Store speaker drivers during the quiz
D. Replace the need for beam termination

8. In laser-safety planning, beam termination means:

A. The planned safe place or surface where the beam ends
B. Turning the room lights off before the show
C. Letting the beam travel until it fades naturally
D. Moving the speaker drivers away from the projector

9. Operator control for the Day 1 laser demo means:

A. Any student may trigger the laser once the slides begin
B. The fog machine operator controls the laser timing
C. The laser is under direct instructor control
D. The laser runs automatically during the entire class

10. Day 1 does not require a full gear load-in because the planned minimum setup uses:

A. A full stage, subs, amps, lighting truss, and student-operated laser
B. Two speaker drivers, a projector/slide deck, and a laser demo only if the safe boundary is clean
C. Only paper handouts with no physical equipment
D. Only a finished speaker cabinet and no safety review

11. EDM101 Day 1 builds on which previous CTS habits?

A. Guessing, skipping notes, and energizing first
B. Electrical reasoning, measurement, verification, and handoff
C. Memorizing brand names without testing anything
D. Painting cabinets before understanding signal or power

12. The main two-week build launched on EDM101 Day 1 is:

A. A HOQS Paraflex Type O 2x12 cabinet
B. A rooftop PV array
C. A drywall window wall
D. A permanent laser projector enclosure

13. For the Type O project, students should use:

A. Unverified plans from memory
B. Only rough dimensions copied from a photo
C. Official HOQS Type O plans supplied by the instructor
D. A random internet cabinet shape if it looks close

14. Why should the class package avoid redistributing proprietary or working-plan cabinet geometry?

A. Because the project is not actually building a cabinet
B. Because the instructor supplies the official plans separately and the package should not redistribute protected working geometry
C. Because students should guess the shape by trial and error
D. Because geometry is unrelated to cabinet behavior

15. The Dayton PA310-8 drivers for Day 1 should be treated as:

A. Temporary build/test drivers that should be operated conservatively
B. Disposable parts that can be abused during class
C. Laser safety equipment
D. A substitute for cabinet plans

16. In EDM101, signal, power, and safety boundaries matter because:

A. They make it possible to turn electrical energy into useful sound, light, motion, and human experience responsibly
B. They let the class skip measurement and verification
C. They only matter after the final day
D. They are decoration words for the slide deck

17. Before energizing the laser, the class should first:

A. Mark the restricted area and beam termination
B. Increase fog output until the beam is harder to see
C. Let students take turns aiming it
D. Begin the cabinet build without a safety review

18. If equipment-specific, site-specific, or regulatory requirements are uncertain, the instructor should:

A. Ignore them if the class is short on time
B. Let students decide by vote
C. Verify the requirements before operation
D. Run the demo first and document later

19. The Day 1 student safety posture should be:

A. Energize first, explain later
B. Control energy, verify boundaries, and choose the safe dry-lab option if needed
C. Treat show gear as harmless because it is entertainment equipment
D. Skip safety if no injury happened last time

20. EDM101 Day 2 is expected to move into:

A. Frequency, wavelength, and why cabinets are shaped on purpose
B. Final job interviews and graduation paperwork
C. PV load-profile calculations only
D. Replacing the laser safety test with free time
