RCS Day 8

Final knowledge check, practical stations, capstone presentation, and closeout

PERFORM. EXPLAIN. VERIFY. HAND OFF.

Valid evidence matters more than speed. A justified stop-work call is professional judgment.

Today the goal is not perfect memory. The goal is safe performance and trustworthy evidence.

Today's flow

Quiz -> model -> guided practice -> capstone lab -> QC

Morning: written check and practical skill stations.
Afternoon: final wall QC, evidence index, and two-minute handoff.
End: instructor conference, reflection, next step, final reset.

Today's targets

What successful work must demonstrate

Safety judgment

Measurement + layout

Systems understanding

Troubleshooting + QC

Evidence + handoff

Complete the final written knowledge check
Demonstrate measurement, inspection, and troubleshooting skills
Present the capstone wall and evidence package
Complete reflection and next-step planning

The day's path

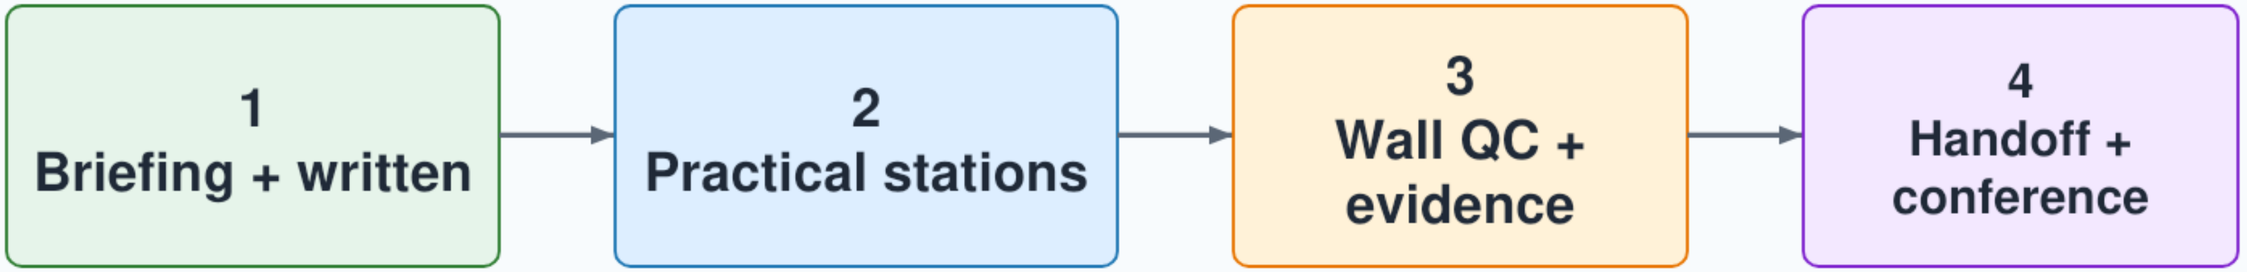

Trace the work before building it

Every station applies the same core rule: check, protect, and verify before moving forward.

Controlled sequence

Release each stage only after its check

No speed bonus. Stop-work calls are evaluated on the quality of the reason and the control applied.

Working roles

6 students; every result receives another set of eyes

Candidate
performs + explains

Assessor
observes rubric evidence

Observer
resets only when directed

Rotate only on the instructor signal.
The candidate may state assumptions and request clarification.
No coaching across stations.

Verification checkpoints

Do not trust appearance alone

Safety + stop-work

Accuracy + quality

System reasoning

Verification + evidence

The rubric values the process and the result.
A student who catches an unsafe or uncertain condition should stop and explain it.

Safety boundaries

The lab begins only inside these controls

All RCS controls active

No speed bonus

Instructor controls faults

Training site only

No energized student work. Use only the tools, materials, and station conditions released by the instructor. Disclose uncertainty.

Professional judgment

Safe work pauses when the evidence conflicts

Professional response
stop -> protect -> verify -> explain

Unsafe response
guess -> rush -> hide uncertainty

Assessment is evidence, not theater. The safest accurate result with clear reasoning is the strongest performance.

Quality criteria

Good physical work leaves visible proof

Follow station boundaries.
State the expected condition before testing.
Perform the task and explain decisions.
Record results in the evidence index.
Handoff scope, proof, and unresolved items clearly.

Unsure? Say what you know, stop, and verify.

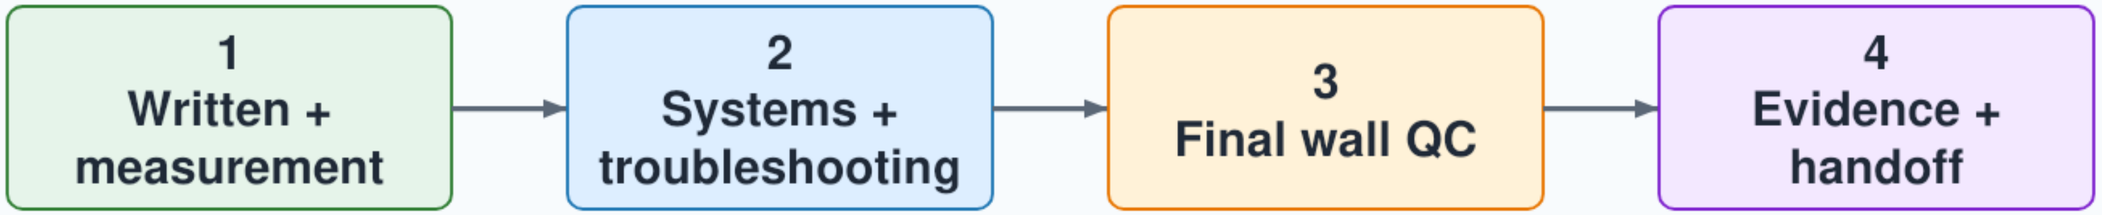

Lab release checklist

The station earns work only after the checks

Assessment boundaries understood.
PPE and station check complete.
No coaching or cross-station answers.
Student may request neutral clarification.
Stop-work calls remain valid.
Instructor alone resets inserted faults.

Afternoon lab

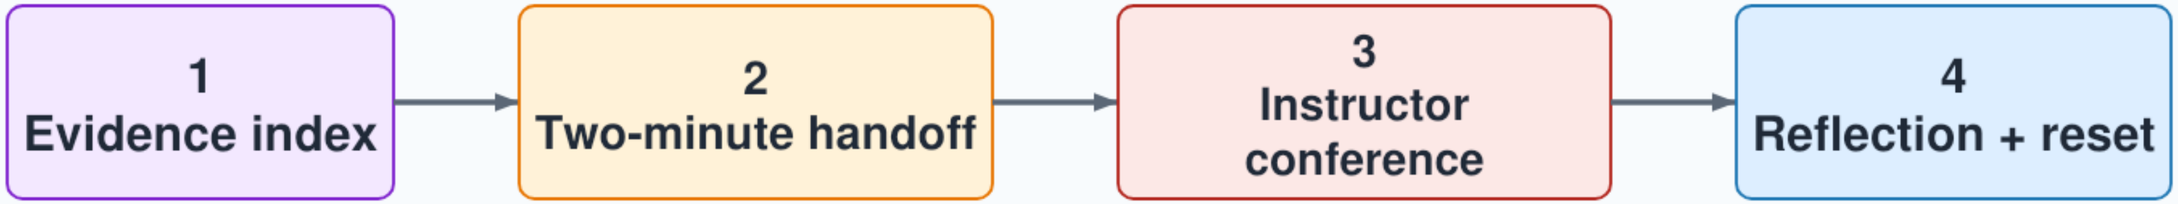

Slow sequence. Clear callouts. No surprises.

Rotate through practical stations, then present the capstone wall and evidence package in two minutes.

Closeout order

End verified, documented, and reset

Close the sequence with one demonstrated strength, one supervised skill, and one specific next professional action.

Evidence log

What students write down

Written	knowledge check	Score: _____
Measure	layout station	Level: _____
Systems	identify + trace	Level: _____
Fault	diagnose + retest	Level: _____
Wall QC	acceptance criteria	Result: _____
Handoff	clear + evidenced	Level: _____

Final status comes from the full evidence set: safety, accuracy, reasoning, verification, documentation, and handoff.

Exit ticket

Three checks before dismissal

1. Name the RCS skill you can now demonstrate.

2. Identify the evidence that supports that claim.

3. State one skill to practice and your next professional step.

Evidence complete. Wall handed off. Reflection submitted. RCS closed.
