

PV102 Day 5

Battery Storage Autonomy and Critical Loads

Storage has a defined job: carry named loads through named time.

CTS Day 21 | Monday, August 10, 2026 | 10:00 AM-3:00 PM

Today’s job

Professional solar work starts before parts move.

- Students decide what the battery is for, then estimate storage need from critical loads, runtime, autonomy days, voltage, usable capacity, and safety boundaries.
- Carry forward the Day 1 habit: match architecture to real need.
- Today adds one design layer and one clean handoff.

Do not guess when an unknown can be recorded.

Storage has a defined job: carry named loads through named time.

Learning targets

By 3:00 PM students should be able to:

- Explain the difference between battery capacity, usable capacity, and autonomy.
- Estimate storage need from essential daily Wh and autonomy goal.
- Identify why battery chemistry, BMS limits, temperature, ventilation, and overcurrent protection matter.
- Defend load shedding as a design tool, not a failure.

Evidence beats confidence. A tragic lesson for civilization, apparently.

Storage has a defined job: carry named loads through named time.

Morning readiness check

Quiz first, then review as evidence.

- Work independently for 12-15 minutes.
- Use wrong answers to locate teaching gaps.
- Ask: what fact would prove this answer?
- Keep review short and specific.

The quiz measures instruction as much as students.

Storage has a defined job: carry named loads through named time.

Core rule

- Storage has a defined job: carry named loads through named time.
- Say it once at the start.
- Bring every debate back to it.
- Use it to reject weak handoffs.

One rule, repeated until reality behaves.

Storage has a defined job: carry named loads through named time.

What students already know

PV101 and RCS are not separate islands.

- PV modules produce DC power.
- Series and parallel change voltage/current behavior.
- Continuity requires de-energized verification.
- Troubleshooting starts from evidence.
- Handoffs protect the next person.

Storage has a defined job: carry named loads through named time.

New judgment today

The skill moves from “can I build it?” to “should this be the design?”

- Define the job.
- Gather the evidence.
- Name the constraint.
- Protect the boundary.
- Record unknowns.

Storage has a defined job: carry named loads through named time.

Energy path and decision boundary

Every arrow is a boundary. Boundaries need ratings, protection, isolation, and documentation.

Storage has a defined job: carry named loads through named time.

Decision checks

Decision	Evidence	Reject if
Keep a design choice	Measured or observed site/load data	It only sounds good
Reject a shortcut	Safety or equipment boundary	It hides a hazard
Carry unknown forward	Named verification step	It becomes fake certainty
Approve handoff	Next person can act safely	It depends on mind reading

Storage has a defined job: carry named loads through named time.

Guided example

Model one complete thinking path.

- Start with the client/job statement.
- Add one measured or observed fact.
- Make one design decision.
- Name one safety boundary.
- Name one unknown and how to verify it.

Storage has a defined job: carry named loads through named time.

Team roles

Three teams of two, roles rotate after the first pass.

- Designer: proposes the first path.
- Verifier: challenges evidence and limits.
- Recorder/handoff lead: writes what the next person needs.
- In a pair, one person may hold two roles, then swap.

Storage has a defined job: carry named loads through named time.

Lab mission

Critical Load Storage Plan

- Teams reduce an oversized wish list into a critical-load storage plan that a real system could support.

This is the work block. Keep it practical and evidence-based.

Storage has a defined job: carry named loads through named time.

Scenario options

Assign one, or let teams choose if the room can handle democracy today.

- Bus conversion overnight loads: fridge, fan, lights, phone, laptop, water pump, optional induction cooktop.
- Remote sensor must survive two stormy days with no site visit.
- Small shop wants outage backup for lights, router, one outlet, and refrigerator only.

Storage has a defined job: carry named loads through named time.

Lab procedure

Run the same loop every day.

- Start with the Day 3 load table or provided scenario.
- Mark each load as critical, useful, or optional.
- Calculate critical daily Wh.
- Choose an autonomy target and estimate required Wh before adjustment.
- List the battery information required before final sizing.

Storage has a defined job: carry named loads through named time.

Acceptance criteria

A complete answer has five parts.

- Match the need.
- Show the path.
- Name the dominant constraint.
- State the safety boundary.
- Record unknowns instead of guessing.

Storage has a defined job: carry named loads through named time.

Safety boundary

No training objective is improved by pretending energy is harmless.

- Use only instructor-approved equipment and procedures.
- Treat PV and batteries as energy sources.
- Stop when measurements do not make sense.
- Follow manufacturer instructions and program safety procedures.

Stop, isolate, verify, ask. The glamorous life.

Storage has a defined job: carry named loads through named time.

Instructor probe questions

Use these when teams get vague.

- What evidence supports that?
- What would make this design fail?
- Which boundary protects the person or equipment?
- What unknown are you carrying forward?
- What would the next crew need to know?

Storage has a defined job: carry named loads through named time.

Peer verification

Peers check the handoff, not the personality of the speaker. Humanity struggles here.

- Can I identify the job?
- Can I follow the path?
- Can I name the constraint?
- Can I see the safety boundary?
- Can I find the unknowns?

Storage has a defined job: carry named loads through named time.

Common failure modes

Correct these early.

- Component list with no job.
- Guess presented as fact.
- Missing safety boundary.
- No units or runtime.
- Handoff too vague to use.

Storage has a defined job: carry named loads through named time.

Evidence language

Require technical sentences.

- Observed: what you saw.
- Measured: value with unit or clear method.
- Assumed: guess being carried forward.
- Verified: checked against source, procedure, or measurement.

Storage has a defined job: carry named loads through named time.

Handoff structure

Make the next person safer.

- Scope: what job is being solved.
- Decision: what was chosen or rejected.
- Evidence: why.
- Boundary: what must be protected.
- Unknowns: what still needs verification.

Storage has a defined job: carry named loads through named time.

Exit ticket

Individual close-out

- Which load did your team remove or limit, and why did that make the system stronger?

Collect before reset so the day leaves a paper trail. Weirdly useful.

Storage has a defined job: carry named loads through named time.

Day-to-day continuity

This is one system, not seven disconnected worksheets.

- PV102 Day 6 connects storage and array decisions to inverter, charge controller, distribution, and protection boundaries.
- Carry forward site notes, load tables, diagrams, and unknowns.
- Do not erase uncertainty. Resolve it.

Storage has a defined job: carry named loads through named time.

Final reminder

What professionals do

- Define the job.
- Verify the path.
- Protect the boundary.
- Document the truth.

Storage has a defined job: carry named loads through named time.

Storage has a defined job: carry named loads through named time.

Close

- Storage has a defined job: carry named loads through named time.

Reset tools. Collect packets. Archive the handoffs.

Storage has a defined job: carry named loads through named time.
