PV101 Day 8 - Hangout Room Setup Lab

CTS Cohort 6 | Thursday 2026-07-16 | Practical Lab: Power, Layout, AV, Safety, and Commissioning

Purpose

This is an easy, practical Day 8 lab for Rich while Tim is on trail crew. Students set up the student hangout room as a real small-scale installation: equipment layout, power, signal cables, sound, seating, safety, testing, and final sign-off.

Teaching frame
This room has history: students from two cohorts ago helped build it, including useful power and good lighting.
Today the two students are not just playing games. They are commissioning a usable technical space.
A good install is not just "it works." A good install is safe, understandable, serviceable, and usable.

Suggested day flow

Time	Activity	Rich notes
Start of class	Quiz already prepared	Keep this normal and calm.
After quiz	Explain Hangout Room Setup Lab	Use the whiteboard frame below.
Planning	Students complete equipment list, room layout, power plan, and cord hazard check	Let students decide, but stop unsafe choices.
Build	Move couches, place screens, connect Switch/Wii/sound, route cords	Watch lifting, cords, power strips, and electronics.
Test	Run display, audio, controller, seating, and trip-hazard checks	Make them test before calling it done.
Wrap	Final 2-minute explanation and evidence photos	Photos matter. Future Tim will thank present Rich.

Whiteboard opener

Write this on the board
Day 8 Lab: Hangout Room Commissioning
Power: What needs electricity?
Signal: What connects to what?
Safety: What can trip, overheat, fall, or get damaged?
User experience: Can people sit, play, hear, see, and move safely?
Final rule: If someone else cannot understand the setup, it is not finished.

Student mission

Your team is responsible for designing and commissioning the student hangout room. You must decide:

[ ] Where the couches go
[ ] Where the screens go
[ ] Where the consoles go
[ ] Where the speakers go
[ ] Where power comes from
[ ] How cords are routed safely
[ ] What could become a trip hazard
[ ] What needs surge protection
[ ] How to test everything
[ ] How to explain the setup to someone else

Equipment planned

[ ] 1-2 flat screens
[ ] Nintendo Switch
[ ] Modded Wii with legally owned/approved games
[ ] 4 GameCube controllers
[ ] Vizio surround sound
[ ] 2 couches
[ ] Power strips / surge protection
[ ] Safe cord routing

Rich safety boundary

[ ] No daisy-chained power strips
[ ] No cords across walk paths without management
[ ] No pinched cords under couch legs
[ ] Screens and speakers stable
[ ] Consoles have airflow
[ ] Students lift/move furniture safely
[ ] Students explain before declaring done

Evidence photos to capture

[ ] Before room setup
[ ] Equipment laid out
[ ] Power / cord routing
[ ] Students testing console, display, and sound
[ ] Final room layout
[ ] Student worksheet or connection map

Main teaching line

Say this

This is a small version of every real install:
You have equipment. You have users. You have power. You have cables. You have safety risks. You have to make it work without making a mess.
